CRANE SERVICES

REMOTE ACCESS SYSTEM

At Kenz Crane Services we have an outstanding international reputation for creative technical solutions. We can provide offshore equipment with a Remote Access System (RAS) that enables remote analyses, remote monitoring and remote trouble shooting.

**A PERFECT TOOL FOR
REDUCING DOWNTIME AND
MAINTENANCE COSTS.**

REMOTE ACCESS SYSTEM

WHAT IT IS...

Remote Access is a system that provides an advanced remote connection, allowing information to be processed in real-time by our technical support team. This connection enables our technical specialists to perform remote analyses and provide immediate technical support, giving you major time and cost benefits.

HOW IT WORKS...

WHAT IT PROVIDES...

- Enables rapid response, 24 hours a day
- Facilitates bi-directional communication
- Enables remote trouble-shooting through online access to system data
- No need for an on-site service engineer in most cases
- Reduces your downtime
- Cuts your maintenance costs
- Allows you to monitor remotely and take preventive measures when required
- Enables you to centralize technical reports and documentation online

When needed, our dedicated team of skilled engineers can provide service support on location as well as by remote access. Our highly trained professionals are available to carry out planned maintenance or emergency repairs, with expert back-up from our head office.
